Cellular and GPS Technology Enables Project Lifesaver to Locate Lost Alzheimer's Patients and Autistic Children in Under 30 Minutes

Program Teams With Locator Systems Corp. to Add Latest Technology for Locating People Who Wander

Chesapeake, Va. and Victoria, BC (May 29, 2007) – Project Lifesaver International, the world's most reliable program for locating people with Alzheimer's, Autism, Dementia, and Down's Syndrome who wander from their homes, announced today that it will add the latest in cellular and global positioning system (GPS) technology to its product line.

Locator Systems Corporation, a manufacturer of state-of-the-art wireless technology, has developed a new tracking wristband that combines cellular, GPS and radio frequency technology to make it easier and faster for caregivers to locate loved ones.

“Project Lifesaver has changed the way that search and rescue missions are performed,” said Gene Saunders, CEO of Project Lifesaver and a retired police captain with 39 years of experience in law enforcement and public safety. “A traditional search without Project Lifesaver may involve tens of searchers and hundreds of man-hours. On average, a search for a person enrolled in Project Lifesaver ends within 30 minutes and costs law enforcement significantly less.”

The organization has more than 10,000 people enrolled in its program and has a 100 percent success rate finding Alzheimer's patients, Autistic children and other people who wander. For eight years, Project Lifesaver has worked with local public safety organizations to find 1,500 people; helping to reduce search times from days to a matter of minutes.

With Project Lifesaver's latest technology, public safety responders and caregivers can go to Project Lifesaver's Web site (www.projectlifesaver.org), enter the client's security information and see the current location of the client displayed on a map. In addition, the new technology will notify caregivers, by e-mail or text message, if the individual strays outside a given area.

Because the system leverages the radio frequency technology currently used by Project Lifesaver, the individual can be located even if they wander outside of cellular coverage areas or are hidden from view from GPS satellites.

"We are providing Project Lifesaver with the latest in cellular, GPS and location based software," said Jim McIntosh, CEO of Locator Systems. "Having this integrated with their existing services allows them to continue to be world leaders in providing a complete program for locating individuals who wander or become lost."

In addition to providing tracking equipment, Project Lifesaver trains and certifies local law enforcement and public safety officials, as well as teaches them how to communicate with people with special needs to gain their trust and put them at ease.

"There are now 5 million people in the United States who have Alzheimer's disease and related disorders, and this number continues to grow," said Eric Hall, CEO of the Alzheimer's Foundation of America. "Project Lifesaver works with caregivers to keep Alzheimer's patients safe and bring them back to their loved ones if they wander or become lost."

How the Project Lifesaver Program Works

Clients who are enrolled in the Project Lifesaver program wear a transmitter, approximately the size of a large watch, which has a personalized radio frequency and cellular signal. When caregivers notify Project Lifesaver, the local Project Lifesaver agency (including police, sheriff or search and rescue teams) responds to the area and begins searching for the individual.

Funded completely by private and corporate donations and grants, Project Lifesaver has the endorsement of the Alzheimer's Foundation of America, the National Sheriff's Association, the International Society of Crime Prevention Practitioners, statewide sheriffs' associations and the National Council of Certified Dementia Practitioners.

About Project Lifesaver International

Project Lifesaver International is a non-profit organization that is committed to helping families quickly find their loved ones who wander because of Alzheimer's, Down's Syndrome, dementia, and Autism. Headquartered in Chesapeake, Va., Project Lifesaver works with local law enforcement agencies in more than 570 communities in 41 states and Canada to protect some of society's most vulnerable citizens. Established in 1999, Project Lifesaver has 10,000 active users and has a 100 percent success rate, reuniting 1,500 missing clients with their families, normally within 30 minutes. For more information or to learn how you can make a donation to Project Lifesaver, please visit www.projectlifesaver.org.

About Locator Systems Corporation

Locator Systems Corporation, based in Victoria, British Columbia, Canada, is a leading designer and manufacturer of advanced tracking and location equipment. The products are currently designed for individuals with Alzheimer's and Autism. For more information on Locator Systems Corp. visit www.locatorsystemscorp.com.
